

Machine consisting of a solid structure in painted steel, designed for palletizing crates or boxes that take an innovative and fast system for the movement on both axes by two independent parallel chains and one engine. It comes with pneumatic grippers for picking containers. The rotation of the packaging is done on a motorized roller. Thanks to the innovative design, dimensions have been optimized, in fact, the formation of the pallet takes place inside the main frame.

Details:

- Possibility to work different types of packaging
- Place packages according to any type of standard format
- Electrical panel movable stand for a better fit to the layout
- Managing programs through a simple and intuitive touch- screen interface
- Extremely easy to use
- Managing alarms and maintenance through p.l.c.
- Safety barriers included into the main frame
- Side entrance for box and pallet evacuation according to needs (see layout)
- Disassembling frame through quick system to ease transportation
- Compact
- Capacity: up to 3 cycles/min

Optionals:

- Conveyor chains/rollers entrance/exit pallets
- Processing device with Buchel format
