

FALCON CLAMP PALLETISER

EASY TO USE AND REALLY FAST

- Falcon, intended for the palletisation of crates or boxes, takes advantage of a revolutionary system which allows the **crate or box handling on two axes**, through a pair of parallel chains and a single motor.
- The machine is equipped with pneumatic clamps for grabbing the containers. The packaging rotation, on the other hand, happens on a motorised roller conveyor.
- Falcon is made of solid painted steel; moreover, thanks to an innovative design, its size has been optimised: the pallet processing occurs inside the main structure.
- **Ideal for:** crates and pallets of different sizes.

ABLE TO PROCESS DIFFERENT FORMATS

TECHNICAL FEATURES

- Possibility of working different types of packagings
- Packaging arrangement according to all standard formats
- Mobile tilted electrical panel, to better suit the layout
- Program management by means of a simple and intuitive touch-screen interface
- Extreme ease of use
- Alarm management and maintenance by means of PLC
- Integrated safety barriers
- Crate-infeed and pallet-outfeed sides according to the needs (see the layout)
- Disassembly through a rapid method, for facilitating the transport
- Solid structure
- Potentiality: up to 3 cycles/min.

OPTIONS

- Chain conveyor / infeed rollers / pallet outfeed
